SECTION 3

Section 3 represents HIV & Integrated Test records with client demographics and a breakdown of the priority population served. Details of the priority populations served are indicated below.

PRIORITY POPULATION*

Heterosexual Female

MSM

Heterosexual Male

Other Population*

Transgender

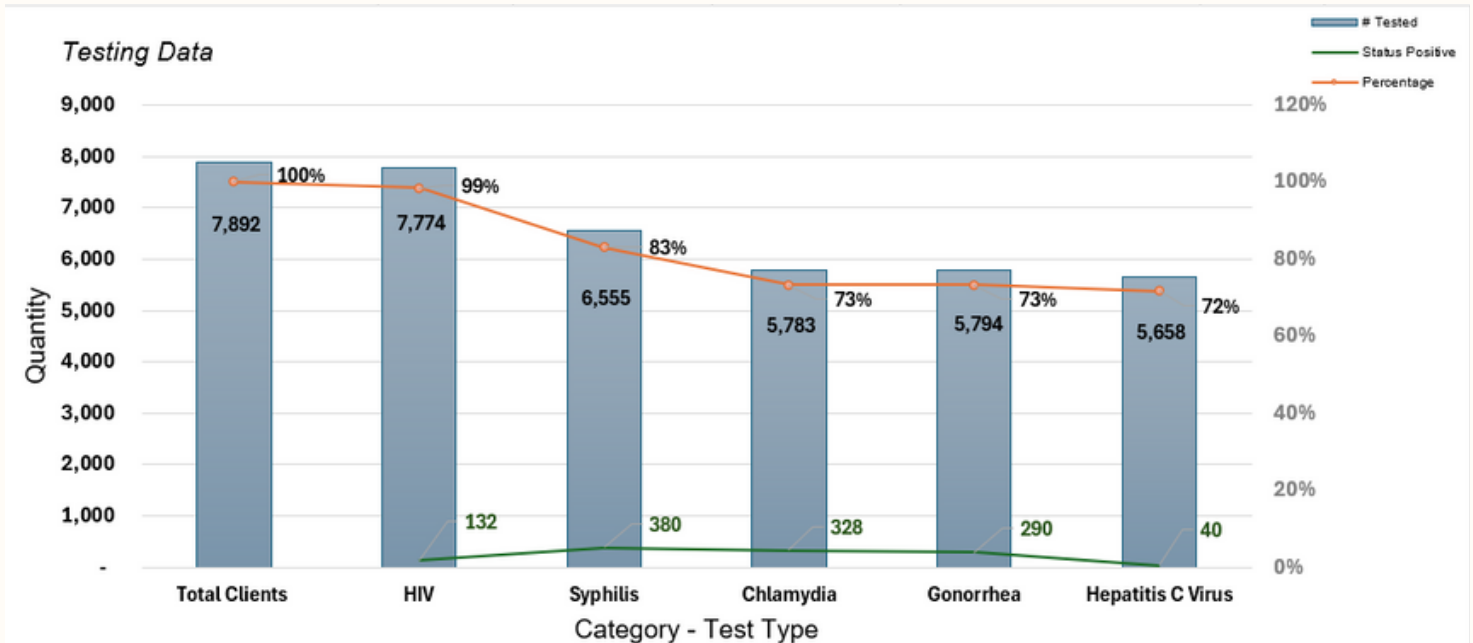

IDU

* The Priority Populations consist of the Heterosexual Female, Men Who Have Sex with Men (MSM), Heterosexual Male, Transgender (MTF and FTM), Transgenders that have Injected Drug Usage (IDU), Heterosexual Male and Females that have Injected Drug Usage and Other Populations that are not grant specific. The percentages in this section focus on the Priority Populations only. The Other Population identifies as American Indian, Asian, Native Hawaiian or Pacific Islander (Two or More Races), Heterosexual Males & Females of other Races, Women Who Have Sex with Women, Unknowns and Declined to Answer.

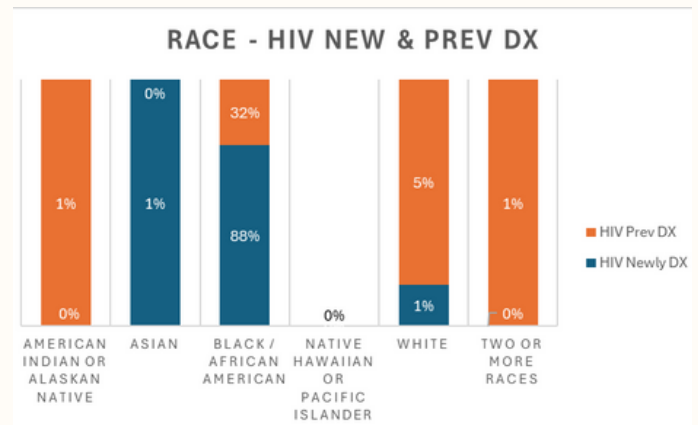

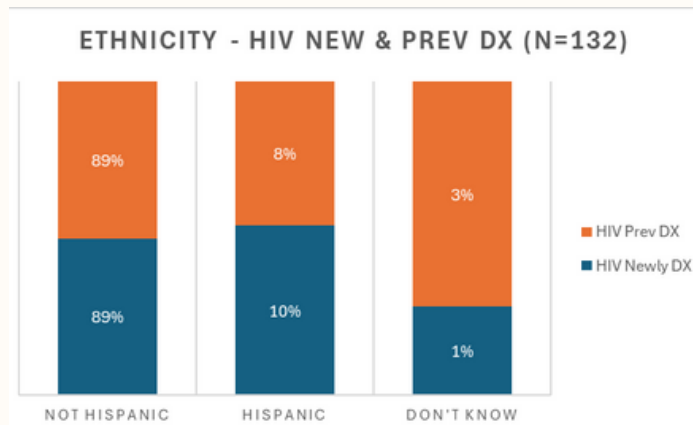

SECTION 4

Section 4 represents HIV & Integrated Test data identifying the type of tests performed for the time period. This section represents a detailed description of the 7,892 clients reported in Section 3 of this report. This section also identifies the percentage of newly and previously diagnosed clients for HIV and the number of newly diagnosed co-infections for each client served.

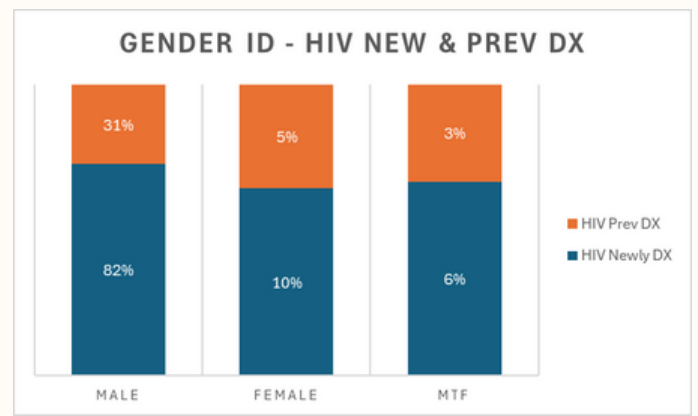

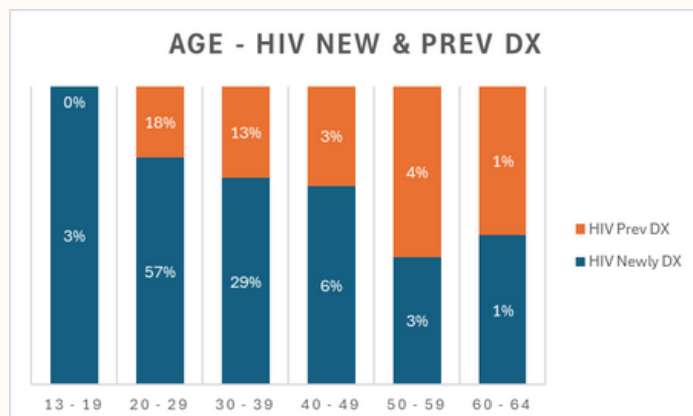

HIV NEW AND PREVIOUSLY DIAGNOSED CLIENTS

Of the 132 Status Positive clients, 94 were newly diagnosed, and 37 were previously diagnosed, with 1 indeterminate diagnosis.

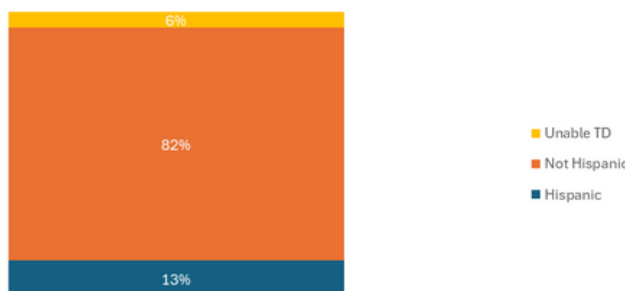

Of the 94 newly diagnosed, 84 clients were Not Hispanic, and of 37 previously diagnosed, 33 were Not Hispanic, surmising the 89% indicated for both diagnosis types.

SECTION 4

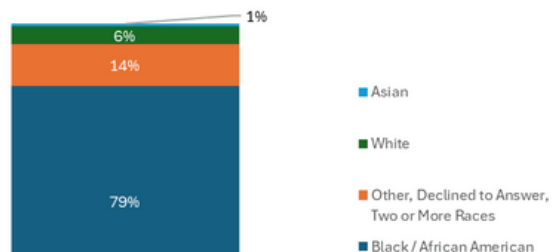

Section 4 continues with the Integrated Testing data identifying the type of tests performed for the time period. This section represents a detailed description of the 7,892 clients reported in Section 3 of this report. This section also identifies the number of newly diagnosed co-infections for each client served.
